MATCHING COLOURS

when you only have minute

FREE LEARNING PRINTABLES: This pack is part of a free series of math and literacy activities designed to be quick to do, but help children learn an essential skill. There are 15 activities to date and you can find them **HERE!**

GETTING ORGANISED

Print off the page below onto card stock. I didn't laminate mine because the card was stiff enough, but you might like to. Cut out the circle and all the coloured pictures. You'll need some pegs or other clips to attach the pictures to.

I used small bits of blu tac to attach the pictures to the small pegs as I like to be able to quickly detach the pictures so I can re-use the pegs for other activities. But some children might be better off if they're glued... I've had plenty of little ones who can't concentrate on anything once they've realised there's blu-tac in easy reach!

HOW TO PLAY

Children simply decide which colour on the palette most accurately matches the picture on their peg. Then they clip it to the colour. Note: the reddish-colour looks dark pink (to me) in the pdf but when I printed it, it looked closer to red, so I made the matching pictures red instead of dark pink.

I hope your students really enjoy this activity!
